A NEW COMPUTER SOFTWARE PACKAGE

Now with this computer software package you can have an extensive chemotherapy database at your fingertips. . . .

Chemotherapy Protocols *and* Chemotherapy Drug Data

Gerald A. Belkin, M.D., F.A.C.P.

David L. Rosenbaum, M.D., F.A.C.P.

Associate Clinical Professors of Medicine • Division of Hematology/Oncology • UCLA Medical Center, Los Angeles, CA.

Ready Reference Source for Retrieving Protocol Data

Chemotherapy Protocols, now available from Alan R. Liss, Inc., combines state of the art technology with the latest information in the treatment of adult neoplastic diseases.

Provides 177 Protocols Indexed to Diseases

Chemotherapy Protocols quickly and accurately retrieves chemotherapy protocols from the comprehensive database provided on the program disk—no online services, telecommunications facilities or modems are required. For every protocol, each drug, dose, method of calculation, route of administration, schedule, as well as pertinent notes and clinical references are detailed.

Expand the Database to Suit Your Needs

Chemotherapy Protocols' unique handler system lets you enter your own or investigational protocols as required. The program capacity allows up to 250 protocols to be indexed to as many as 100 diseases. You may also modify protocol information, or delete obsolete protocols as needed.

System Security

System security is maintained by use of personal access codes to prevent unauthorized access to your protocol system.

Calculate Drug Dosages

Chemotherapy Protocols calculates and displays appropriate dosages for individual patients at the touch of a button. You simply enter the weight and height of the patient and the adjusted dosages are displayed on the screen. You may even choose to enter the information in kilograms and centimeters, or pounds and inches, as you prefer.

Printed Verification

Chemotherapy Protocols produces printed protocol outlines (including calculated doses) for distribution to hospital staff and inclusion in patient records. The printed version, complete with space for the physician's signature and additional notes, can be used to enhance safety by providing a verification of the physician's orders.

Instantaneous Drug Data Retrieval

The companion program, *Chemotherapy Drug Data* allows instantaneous retrieval from its extensive database listings of the latest and most widely prescribed antineoplastic drugs. *Chemotherapy Drug Data* provides practical drug data for virtually all conventionally employed chemotherapeutic agents.

A Comprehensive Reference Source of Practical Drug Data

Chemotherapy Drug Data provides information on: packaging • mixing • stability following dilution • compatibility with IV fluids • precautionary notes, including side effects.

Interactive System

In addition, *Chemotherapy Drug Data's* interactive system allows revision of existing data as well as the addition of new data as required.

Chemotherapy Protocols and *Chemotherapy Drug Data* will be used by Oncologists, including residents, in hospital settings and in private practice. *Chemotherapy Protocols* and *Chemotherapy Drug Data* will also serve as an important tool for Oncology Nurses and Hospital Pharmacists. In addition, the two programs will prove an invaluable aid in the education and training of medical students, residents and fellows, and in pharmaceutical training.

Easy to Use

Chemotherapy Protocols and *Chemotherapy Drug Data* are completely menu driven systems, allowing even the novice computer user to feel at home within minutes. Although a comprehensive instruction manual is provided, the programs are so simple to use that training is virtually eliminated.

Updates Issued

Updates of both programs will be made available in the future.

Chemotherapy Protocols and Chemotherapy Drug Data

Gerald A. Belkin, M.D., F.A.C.P., and David L. Rosenbaum, M.D., F.A.C.P.
ISBN 0-8451-9900-5 \$290.00

ORDER FORM

Please send me **Chemotherapy Protocols and Chemotherapy Drug Data** at \$290.00 U.S. per copy. (#S900)

Please send me a demonstration diskette of **Chemotherapy Protocols and Chemotherapy Drug Data**.

New York State residents please add appropriate sales tax. No postage or handling charged on prepaid orders.

Payment must be made in U.S. dollars. Payments not drawn on a U.S. bank will be subject to bank collection charges.

Return this form with payment or purchase order to:

ALAN R. LISS, INC. • 41 East 11th Street • New York, NY 10003

All prices subject to change without notice.

Order NOW by Phone: We are happy to accept orders Monday-Friday, 9am-5pm at (212) 475-7700. Please have your credit card information ready.

Please charge this order to my _____

☐ MasterCard ☐ VISA ☐ American Express

JOURNAL OF CELLULAR PHYSIOLOGY

A Wistar Institute Press Journal Published by Alan R. Liss, Inc.

NOTICE TO CONTRIBUTORS

Revised July 1985

Manuscripts and all editorial correspondence should be sent to Dr. Vittorio Defendi, New York University Medical Center, Department of Pathology, 550 First Avenue, New York, New York 10016, USA. **It is required that the letter of submission be signed by all co-authors.**

All manuscripts must be in English. Authors whose "first" language is not English should arrange for their manuscripts to be written in idiomatic English before submission. Either American or British style is acceptable. Submit the original and two clear copies of all elements (including tables and figures) typed on one side of good quality 22 × 28 cm (8½" × 11") paper with at least 25 mm (1") margins. Double space everything. Start a new page for each major division of the manuscript. Number all pages in sequence, beginning with the title page. Arrange the copy in the following order:

TITLE PAGE: This should contain:

- Complete article title
- Names and affiliations of all authors
- Institution(s) at which the work was performed with city, state, and zip code
- Acknowledgments of funding
- Name, address, telephone number, and cable address or Telex number for all correspondence
- A running head of not more than 48 characters
- Total number of text figures and tables.

ABSTRACT: This should summarize the major findings and conclusions in the paper in not more than 250 words compressed into a single paragraph. The abstract will serve in lieu of a concluding summary and should be intelligible without reference to the rest of the paper.

TEXT: The text should follow the format: Abstract, Introduction, Materials and Methods, Results, Discussion, and Acknowledgments. Use subheadings and paragraph titles whenever possible. Define unusual abbreviations at first mention. Units of measure must be written in metric units.

LITERATURE CITED: References in the text to the literature should be made by author's name followed by year of publication:

... studies by Briggs (1975) reveal...

... studies by Briggs and Porter (1975) reveal...

If there are more than two authors, use the first author and et al. The final list must be alphabetized and include only references cited in the text. Each entry must include the names of all authors, complete title of the work cited, and inclusive page numbers. Abbreviations of journal titles should follow those used in *Index Medicus*. Examples:

Hall, D.J., O'Leary, J.J., Sand, T.T., and Rosenberg, A. (1981) Commitment and proliferation kinetics of human lymphocytes stimulated in vitro: Effects of α -MM addition and suboptimal dose on concanavalin A response. *J. Cell Physiol.*, 108:25-34.

Zwilling, E. (1961) Limb morphogenesis. In: *Advances in Morphogenesis*. M. Abercrombie and J. Brachet, eds. Academic Press, New York, Vol. 1, pp. 301-330.

LEGENDS: Each illustration must have a legend and be numbered consecutively with Arabic numerals. Abbreviations pertaining to the labeling of figures should be listed once, alphabetically, and placed before the first figure containing these abbreviations.

TABLES: Each table must be typed on a separate page, be numbered in order of appearance with Arabic numerals, have a title, and be keyed into the text.

ILLUSTRATIONS: Use illustrations sparingly; they should not duplicate information already made clear in the text. Illustrations may be mounted or unmounted. Good quality glossy black and white photographs 5" × 7" or 8 × 10" are preferred; a charge will be made for color. All graphics and lettering must meet professional standards and be legible after reduction in size. Illustrations must be numbered in order of appearance with Arabic numerals and keyed into the text. Name of author, figure number, reduction requested, and an arrow indicating the orientation should be typed on a gummed label and affixed to the back of each illustration. Do not write directly on the back of the photo. If no reduction is desired, an illustration or group of illustrations should not exceed 6¾" (approximately 17.1 cm) wide by 8¾" (approximately 22.2 cm) long. Illustrations should be enclosed in an envelope.

All manuscripts submitted to JOURNAL OF CELLULAR PHYSIOLOGY must be submitted solely to this journal, may not have been published in any part or form in another publication of any type, professional or lay, and become the property of the publisher. Any material reproduced or adapted from any other published or unpublished source must be duly acknowledged. It is the author's responsibility to obtain permission to reproduce copyrighted material. Upon acceptance of a manuscript for publication, the author will be requested to sign an agreement transferring copyright to the publisher, who reserves copyright. No published material may be reproduced or published elsewhere without the written permission of the publisher and the author. The journal will not be responsible for the loss of manuscripts at any time. All statements in, or omissions from, published manuscripts are the responsibility of the author, who will assist the editor and publisher by reviewing proofs before publication. Reprint order forms will be sent with the proofs. It is important to order, initially, a sufficient quantity of reprints since the cost is substantially higher if ordered after publication.

To help defray the costs of printing Wistar Institute Press journals, the publisher will request from the author \$18 per page for text and tabular material and \$9 per page for illustrations, both line drawings and photographs. Such payments are voluntary and are not a prerequisite to the publication of any article. However, because of the very high cost of color work, such work will be initiated only at the author's request and expense.
